New NEM 077 system for linear and spherical glass.

Newsletter
09 - ’14

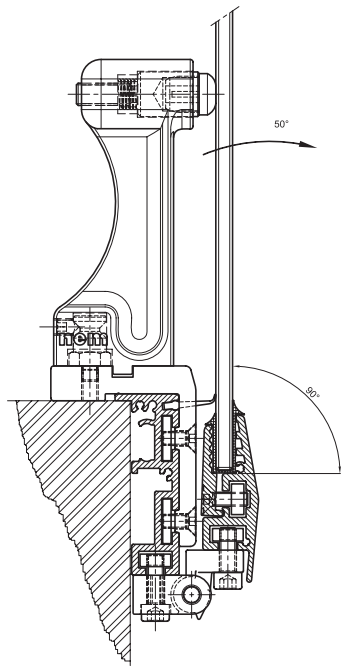

NEM 077. Aluminium lift-down opening system for single linear and curved glass improves its characteristics.

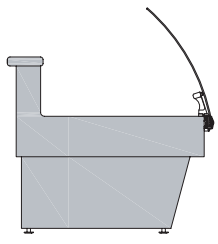

Vetro inclinato 10.5° - R1016
R1016 - 10.5° angle glass

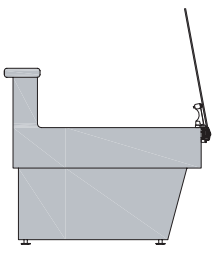

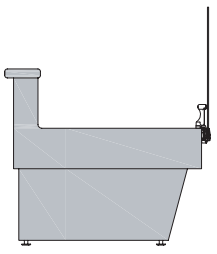

Vetro piano inclinato 10.5°
10.5° angle flat glass

Vetro piano verticale 0°
Vertical 0° angle flat glass

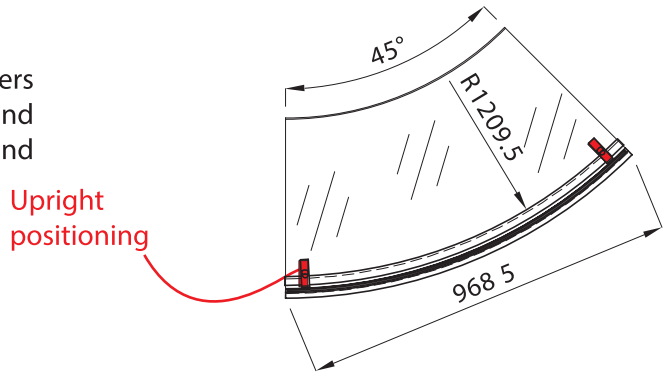

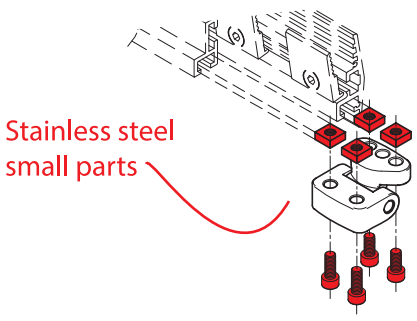

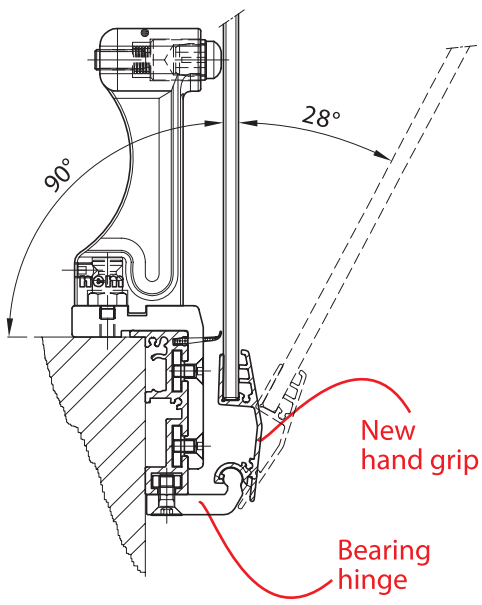

New alignment uprights produced through die-casting process.
NEM 077 system foresees uprights for glass alignment and support.
These three kinds of upright distinguish themselves by the application on curved, oblique linear and vertical linear glass (see picture).
The special setting system allows the perfect alignment of glasses in case of canalization of more consecutive modules.
Now these uprights are produced through die-casting process. In this way esthetic, performances and technical characteristics of the items are very improved.
The new design has been studied so that the new and the old system can match.

Uprights for each corner.
In the new NEM 077 version all the rounded shape corners foresee the uprights assembly. Now the glass setting and alignment with other canalized modules is easier and quick for corners too.

Stainless steel small parts.
NEM 077 is mounted in a lot of environments. In order to improve efficiency and duration of the products, NEM 077 system is now provided with stainless steel small parts.

New version of NEM 077 for linear glass.
A new hand grip is now available for NEM 077. It can be applied only on linear glass, vertical or oblique. It allows a “light” version of the system.
The new hand grip is supported by a bearing hinge so this version is reliable as the “standard” one. The lighter hand grip profile, the glass fixing system and the bearing hinges make this system cheaper and quick to install. In this way the final price will decrease.
